

PROBLEM STATEMENT

REAL-TIME WATER QUALITY MONITORING AND CONTROL SYSTEM

01	I AM	Manufacturer
02	I'm trying to	Detect the water quality monitoring and control system in river
03	But	Using different types of sensors is a major problem in this system
04	Because	If any one of the sensor is damaged or not working doesn't detect the system properly
05	Which makes me feel	This leads people to drink and use unsanitary water
