Project Name	Real- time river water quality monitoring and control system

CREATE AND CONFIGURE IBM CLOUD SERVICES

Create IBM Watson IoT Platform and Device

- IBM Watson IoT platform acts as the mediator to connect the web application to IoT device, so create the IBM Watson IoT platform
- In order to connect the IoT device to the IBM cloud, create a device in the IBM Watson IoT platform and get the device credentials

The screenshot displays the IBM Cloud IoT Platform console. The top navigation bar includes the IBM Cloud logo, a search bar, and links to Catalog, Manage, and the user's account (RAMESH M). The main content area shows the 'Internet of Things Platform-mq' resource, which is active. A sidebar on the left provides navigation options: Manage, Plan, and Connections. The central panel features a 'Let's get started with IBM Watson IoT Platform' section with a 'Launch' button. Below this, a 'Ready for the next level?' section titled 'IBM Watson IoT Platform Journey' presents three service plans: Lite (selected), Non-Production, and Production. Each plan has a brief description of its capabilities. A user profile dropdown menu is open on the right, showing the user's name and various account management options.

- Thus IBM Watson platform services are successfully created.
